

This cross-sectional view shows a central shaft (28) passing through a series of nested components. The shaft has a wider section (29) at the top. It passes through a component (10) which has a central bore (20) and side bores (21). The shaft then passes through a component (12) which also has a central bore (26) and side bores (26a). The shaft then passes through a component (16) which has a central bore (22) and side bores (22a). The shaft ends in a tapered tip (14) which is shown in a cross-section (18). The tip is mounted on a base (19) which has a central bore (30) and side bores (24). The base is shown in a cross-section (30).
